

Economic Development

Engineering | Planning | Environmental

Through BREC's experiences with large-scale economic development initiatives, our team has gained an understanding of the complexity of issues often associated with such projects, which can include confidentiality, security, power and water sources availability, utility infrastructure, terrain challenges and environmental issues. Our familiarity with local utilities, regulations, economic conditions and geography enables us to serve as a local partner on economic development projects. Our intimate knowledge of local conditions can assist in resolving challenges on even the most sensitive issues.

BREC provides the following economic development services:

- Industrial Park Planning/Design
- Commercial Center Planning/Design
- Professional Park Planning/Design
- Institutional and Public Facility Planning/Design
- Process Water Supply
- On-Site Utilities Infrastructure
- Industrial Site Certification
- Site Selection & Evaluation
- Design/Build Projects
- Constructed Wetlands
- Vacuum Sewer System Design
- Sludge Dewatering and Odor Control Systems
- Spray Irrigation Systems
- Residential and Community Subsurface Systems
- Sewer Rate Studies
- Bridge/Stream Crossings
- Constructor Study
